

TELEPHONE HYBRID-2

Introducing the Telephone Hybrid-2, the advanced active version of our passive Telephone Hybrid-1 unit. This analog unit with digital control incorporates features like ducking, significantly improving intelligibility in broadcasts.

This hybrid bridge the gap between professional audio equipment and the public telephone network, ensuring protection for both your gear and the phone lines while accommodating varying line signals and conditions.

Active balanced interfacing:
Ensures stable and high-quality audio signal transmission.

Variable high and low cut filters:
Allows precise control over audio frequency ranges for optimal sound clarity.

Superb audio separation:
Delivers exceptional clarity by maintaining distinct incoming and outgoing audio signals.

Externally adjustable R and C balance:
Facilitates easy fine-tuning of receive and send audio levels.

GPIO interfacing with mixing consoles:
Enables seamless integration with modern mixing consoles.

Auto ducking:
Automatically reduces background noise to enhance speech intelligibility during broadcasts.
