

# TELEPHONE HYBRID-1

Seamlessly connect your standard analog telephone line to your mixing console with the D&R Passive Telephone Hybrid-1. Designed for effortless recording and broadcasting, this reliable interface ensures crystal-clear communication between callers and presenters.

With carefully engineered internal circuitry, the Hybrid-1 delivers outstanding audio separation between incoming and outgoing signals, effectively converting a two-wire system into a four-wire setup with dedicated inputs and outputs. Housed in a durable 9.5" metal frame, the unit features jack inputs/outputs and RJ-11 phone connections for easy integration. It operates without the need for external power—offering a stable and hassle-free solution for your broadcast needs.

**Passive balancing interface**  
Ensures stable and reliable signal integrity

**Output**  
Provides a balanced mic level at -20dBu for optimal compatibility with a wide range of audio equipment

**Input level**  
Accepts a balanced line level input at 0dBu, allowing seamless integration with professional audio systems

**R/C balance**  
Fully adjustable to tailor the receive and send audio levels to your specific needs

**Separation**  
Achieves more than 30dB of separation between incoming and outgoing signals, ensuring crystal-clear audio quality
