

How to make OFF-AIR recording with the AIRLITE

Question:

How can I record off-air conversations/ eg. pre record interviews with the AIRLITE-USBoard?

Answer:

You can make pre recordings by using the voice track mode.

Press and hold the ON button of a channel and it will start flashing.

Now this channel is in Voice Track (VT) mode and its routed to the VT buss which is connected to the USB audio codec and therefor available on the PC
