

AIRLITE VOIP FOR MAC?

Question:

"There doesn't appear to be VOIP software update for Mac. Does airlite not offer support VOIP for mac?"

Answer:

- The Airlite doesn't provide a real 'VoIP' network port on the mixer. Instead it provides a separate USB connector (ch. 8 on mixer) which provides 1x stereo IN/OUT codec for your favourite VoIP/SIP Software.
- You are totally free to use any (free) software which provides the VoIP functionality for you. Skype is a well-known and widely used application. Setup the Airlite ch. 8 in the audio settings of the application.
- Please take a look at the link below for a Mac / Windows based application for a softphone.
